

- **Project Title: Shopping Zone.**

Theory: This project is based on online product order. In this project we use clothes as a product. Here we provide for shopping by two ways, which is search by showroom and search by clothes. In the search for a showroom there are three shops. For this project we use structure, recursive function, switch case and also use build-in function. We use three type built-in functions which are strlen, strcpy and strcmp. We can use this project because of a user-friendly and information secure system. This project gives an idea for an online ordering system and portal creation system.

- **Tools/software/platform:**

Codeblocks.

- **Input & Output:**

```
"C:\Users\MS COMPUTER\Documents\shopping.exe"
Your are successfully logged in....
